Projects

Andriod encrypted sms system

An Android application that allows users to send and receive SMS messages with end-to-end encryption, ensuring privacy and security. The app uses modern encryption techniques to protect user communication.

Student management system

A Student Management System (SMS) in Java is a software application designed to help educational institutions efficiently manage student-related information and activities. It typically provides functionalities for storing, retrieving, updating, and deleting (CRUD operations) student data.

To-Do List App

Built a task management application that allows users to add, edit, and delete tasks with a simple GUI. Implemented Java Swing for a clean user interface and file handling for data storage.

Relevant skills

Programming Languages: Java, Python, My SQL

Tools: Git,Github

Operating system: Linux

Certification

- Java programming - Great learning
- Python programming - Sanfoundry

Personal Traits

- Quick Learner   • Leadership   • Passion for Learning   • Problem Solving

- **Languages Known -** Tamil(Native Fluency), English
